Ali Mohammed Al-Bayati

Backend Developer | Node.js | NestJS | TypeScript

alialbayati468@gmail.com | +963 967 212 983 | Iraqi National | Based in Aleppo, Syria | github.com/Ali4681 | linkedin.com/in/ali-al-bayati-59b41b319

PROFESSIONAL SUMMARY

Backend Developer with professional experience designing and delivering scalable, high-performance server-side applications using Node.js and NestJS. Proficient in RESTful API design, JWT authentication, RBAC, and data modeling with MongoDB and PostgreSQL. Experienced with Prisma ORM, Mongoose, real-time WebSockets, offline sync architecture, and production deployments via Docker and CI/CD pipelines on VPS.

PROFESSIONAL EXPERIENCE

Backend Developer — RADAR Company Apr 2024 – Dec 2024 | Aleppo, Syria

- Designed and developed scalable, high-performance backend services using Node.js and NestJS for production web and mobile applications.
- Architected RESTful APIs consumed by frontend and mobile teams, following REST best practices and OpenAPI documentation standards.
- Built relational and NoSQL schemas using PostgreSQL with Prisma ORM and MongoDB with Mongoose, with indexing strategies that reduced query latency.
- Implemented JWT-based authentication and RBAC to enforce secure, granular authorization across all services.
- Integrated Firebase Cloud Messaging (FCM) for real-time push notifications across web and mobile clients.
- Configured Docker containers, Nginx reverse proxy, and PM2 on Contabo VPS with automated CI/CD pipelines.
- Collaborated in Agile sprints with frontend, mobile, and QA teams to deliver features on schedule.

PROJECTS

Traffic Violations Management System

NestJS | *PostgreSQL* | *Prisma ORM* | *JWT* | *RBAC* | *WebSockets* | *Push Notifications*

- Architected a multi-role REST API serving three client apps (Citizen, Officer, Admin) with JWT authentication and granular RBAC (CITIZEN, OFFICER, ADMIN).
- Built vehicle and violation management APIs including GPS-based violation registration with photo upload, license plate lookup, and payment processing with receipt generation.
- Implemented offline sync support for field officers, enabling violation registration without internet connectivity and background synchronisation when reconnected.
- Developed officer account approval workflow, violation type management, audit logging, and a push notification system.

AutoService24 — Vehicle Services Marketplace

NestJS | *PostgreSQL* | *Prisma ORM* | *Firebase FCM* | *WebSockets* | *Google Maps API*

- Engineered a scalable backend for a vehicle services marketplace app published on Google Play Store and Apple App Store.
- Implemented real-time WebSocket chat, geolocation-based provider search (500 km radius), JWT and OAuth authentication, FCM notifications, and API rate limiting.

LegalConnect — Legal Services Platform

NestJS | *MongoDB* | *Mongoose* | *Firebase FCM*

- Engineered scalable backend handling legal service management, case submissions, document storage, and secure client-lawyer communication.
- Applied rate limiting, input validation, and RBAC guards to protect sensitive financial and legal data.

University Timetable Generation System — Capstone

Next.js | *NestJS* | *MongoDB* | *Mongoose* | *CSP Algorithms*

- Full-stack scheduling system using Constraint Satisfaction Problem (CSP) algorithms to auto-generate conflict-free university timetables.
- Built a NestJS backend with MongoDB and Mongoose for flexible storage of scheduling constraints, rooms, courses, and generated timetable scenarios.
- Admin dashboard with real-time schedule review, scenario comparison, and instant conflict detection.

Islamic Inheritance Management System

NestJS | *PostgreSQL* | *Prisma ORM* | *TypeScript*

- Engineered a rule-based Fiqh engine implementing Islamic inheritance laws including ʿawl, radd, hajb, and Umariyyatayn cases with full test coverage.
- Designed a normalized PostgreSQL schema with Prisma ORM covering heirs, relationships, estate distribution, and case history.
- Built a RESTful API with role-based access control for case management, heir registration, and automated share calculation.
- Implemented Arabic PDF generation using PDFKit with Cairo font and HarfBuzz shaping for accurate RTL text rendering.

EDUCATION

B.Sc. in Information Technology and Communications Engineering — Ebla Private University

Sep 2019 – Jun 2025 | Aleppo, Syria

Coursework: Software Engineering, Computer Networks, Database Management, Web Technologies, Communication Systems. Capstone: University Timetable Generation System (Full-Stack, NestJS, MongoDB, CSP-based).

CERTIFICATIONS

Cybersecurity Training Program — Darrebni Company

Sep 2024 – Jan 2025 | Remote

Covered network security, web application penetration testing, threat detection, incident response, and vulnerability management. Received official recommendation letter.

TECHNICAL SKILLS

Backend: Node.js, NestJS, TypeScript, JavaScript ES6+, RESTful API Design, WebSockets, Microservices Architecture

Databases: PostgreSQL, MongoDB, Prisma ORM, Mongoose, Data Modelling, Indexing, Query Optimisation

Auth and Security: JWT, RBAC, Google OAuth, Apple OAuth, OTP, API Rate Limiting, Input Validation

Tools and DevOps: Git, GitHub, Docker, Nginx, PM2, CI/CD Pipelines, Vercel, VPS Contabo

Other: Firebase Auth, Firebase FCM, Push Notifications, Geolocation APIs, Offline Sync, SSR

LANGUAGES

Arabic: Native / Bilingual | English: B2 Upper Intermediate (Professional Working Proficiency)
